Brief description

Application
The ZoneEase VAV has PI control characteristics and is used for pressure-independent temperature control of VAV units in the comfort zone.

Pressure measurement
The integrated maintenance-free Belimo D3 pressure valve sensor is also suitable for very small volumetric flows. It is for this reason that it enables versatile applications in the comfort zone, e.g. in offices, hospitals, hotels, residential construction, cruise ships, etc.

VAV – Temperature control
For pressure-independent temperature control VAV applications, room temperature is obtained

rom Room Unit. Room Temperature Setpoint is obtained from the Room Unit through manual buttons (22RT-A001 only) or APP or from command through BACnet MS/TP. The operating range $\dot{V}min \dots \dot{V}max$ or reheating valve or electric reheater are controlled based on heating demand or cooling demand, depending on temperature difference (setpoint minus actual), P-Band value (adjustable) and Tn value (adjustable Integral gain)

VAV/CAV – variable/constant volumetric flow control
For variable volumetric flow applications with a modulating reference variable, The operating range $\dot{V}_{min} \dots \dot{V}_{max}$ can be controlled via BACnet, APP or Room Unit (22RT-A001)

VAV – Demand Control Ventilation (DCV)
For DCV applications, The operating range $\dot{V}min \dots \dot{V}max$ are controlled based on demand, dependng on CO_2 difference (setpoint minus actual), Tn_CO_2 value (adjustable)and Tn_CO_2 value (adjustable)

Integration
BACnet MS/TP integration

BACnet function
Addressable from 1 to 127 in a singular BACnet MS/TP network. Recommended to have repeater for every 32 BACnet Devices. Entire BACnet internetwork address limited by 4194303 device, as according to BACnet Limitation.

Additional Sensor integration
A CO_2 Sensor can be connected to the ZoneEase Compact Controller for data collection purpose in Temperature controlled applications and as an control input for DCV application.

Operating and service devices
Actuator and Room Unit NFC interface for Android Smartphone Belimo Assistant App.

Test function / test display
The ZoneEase VAV features two LEDs which shows power status, bus communication, adaptation

OEM factory settings
The ZoneEase VAV is mounted on the VAV box unit by the unit manufacturer, who adjusts and tests it according to the application.

Digital Output connection

BACnet MS/TP

BACnet STP cable (22 AWG, 0.33 mm²) and EOL termination as according to BACnet

Dimensioning of supply and connecting cable

General   In addition to the actual wire sizing, attention must also be paid to the surrounding area and the cable routing.Signal cables must not be laid in the vicinity of load cables, objects liable to cause EMC interference etc. If possible, Shielded Paired or Shielded layer stranded cables improve immunity to interference, refers to BACnet Standard and recommendations.

24 V supply, dimensioning and cabling   The dimensioning and installation of the AC 24V supply, the fuse protection and the cables are dependent on the total operated load and local regulations. Account must be taken of the following performance data, including the starting currents of the actuators:

– Other devices which are intended to be connected to the same 24 V supply

– Reserve capacity for subsequent expansion, if planned.

Tool connection

Settings and diagnostics	For Portable Testing and Commisioning of the VAV unit, the ZoneEase VAV can be operated via the integrated NFC interface using the Smartphone ZoneEase APP.

Belimo Cloud Business Application support workforce efficiency improvement by creating a working platform for OEMs, SIs, Project Managers, Consultants and Building Owners to prepare, configure, calibrate, manage, review and maintain VAV system throughout the product lifecycle.

Smartphone – Belimo Assistant App

The NFC antenna range of the ZoneEase VAV is located between Belimo or the OEM logo and the NFC mark.
